

ASL Milestone 1 – submission guidelines

The deadline is set for 9.11.2014 (Sunday) at 23:59. You should submit your code via the given SVN repository[1] (also announced on the course web-page). Make sure to commit your work early because we are going to check out your submissions based on the deadline time-stamp (with no exceptions).

Your submission directory should contain the following:

- Working code with the ant script that builds and runs the programs.
- SQL commands that contain the schema and stored procedures, i.e., the script that sets up the database.
- Report (in pdf format).
- Raw experiment log files for the data used in the report. Make sure to document the files accordingly.

Please make sure to follow the provided guidelines[2] when preparing your report. We will invite people for presentation/demo on the working system and for explanation of unclear things of the report on demand.

If you do not plan to submit the milestone, please de-register from the course via mystudies.
